LIST OF CONTENTS

NUMBER 1

M.J. Bagajewicz 1 Energy savings horizons for the retrofit of chemical processes. Application to crude fractionation units

K.H. Sahin and A.R. Ciric 11 A dual temperature simulated annealing approach for solving bilevel programming problems

H. Kay 27 SQSIM: a simulator for imprecise ODE models

R.W. Maier and W.B. Whiting 47 The variation of parameter settings and their effects on performance for the simulated annealing algorithm

M. Kleiber and J.K. Axmann 63 Evolutionary algorithms for the optimization of Modified UNIFAC parameters

J. Zhao, B. Chen and J. Shen 83 Multidimensional non-orthogonal wavelet-sigmoid basis function neural network for dynamic process fault diagnosis

G. Pagani, A.A. Monforte and G. Bianchi 93 Performance analysis of several algorithms solving inexact simulation problems

H.M. Park, T.H. Kim and D.H. Cho 109 Estimation of parameters in flow reactors using the Karhunen–Loève decomposition

K. Wang, Y. Qian, Y. Yuan and P. Yao 125 Synthesis and optimization of heat integrated distillation systems using an improved genetic algorithm

S. Mehta and W.E. Stewart 137 Solution and sensitivity analysis of differential-algebraic-Volterra equation systems

J.-H. Lee and M.P. Dudukovic 159 A comparison of the equilibrium and nonequilibrium models for a multicomponent reactive distillation column

NUMBER 2

S. Joe Qin 173 Control performance monitoring — a review and assessment

M.A. Henson 187 Nonlinear model predictive control: current status and future directions

S.D. Brown 203 Information and data handling in chemistry and chemical engineering: the state of the field from the perspective of chemometrics

M. Nikolaou 217 Process Measurement and Control: Industry Needs 6–8 March 1998 Sheraton New Orleans Hotel: Workshop on Identification and Adaptive Control

M. Soroush 229 State and parameter estimations and their applications in process control

NUMBER 3

H.F. Meier, J.J.N. Alves and M. Mori 247 Comparison between staggered and collocated grids in the finite-volume method performance for single and multi-phase flows

S. Rohani, M. Haeri and H.C. Wood 263 Modeling and control of a continuous crystallization process Part 1. Linear and non-linear modeling

S. Rohani, M. Haeri and H.C. Wood 279 Modeling and control of a continuous crystallization process Part 2. Model predictive control

V.R. Subramanian, B.S. Haran and R.E. White 287 Series solutions for boundary value problems using a symbolic successive substitution method

D. Britz 297 An interesting global stabilisation of a locally short-range unstable high-order scheme for the digital simulation of the diffusion equation

J. Zhang, A.J. Morris, E.B. Martin and C. Kiparissides 301 Estimation of impurity and fouling in batch polymerisation reactors through the application of neural networks

J.R. Phimister, E.S. Fraga and J.W. Ponton 315 The synthesis of multistep process plant configurations

B.V. Babu and K.K.N. Sastry 327 Estimation of heat transfer parameters in a trickle-bed reactor using differential evolution and orthogonal collocation

I.P. Androulakis and G.V. Reklaitis 341 Approaches to asynchronous decentralized decision making

M.A. Brown and S.W. Churchill 357 Finite-difference computation of the wave motion generated in a gas by a rapid increase in the bounding temperature

E. Bruce Nauman and J. Savoca 377 Efficient discretization schemes for Graetz-type problems

R. Sharma, D. Singhal, R. Ghosh and A. Dwivedi 385 Potential applications of artificial neural networks to thermodynamics: vapor–liquid equilibrium predictions

F. Tiscareño-Lechuga 391 A sufficient condition for multiple solutions in gas membrane separators with perfect mixing

G. Baffi, E.B. Martin and A.J. Morris 395 Non-linear projection to latent structures revisited: the quadratic PLS algorithm

H.G. Hiden, M.J. Willis, M.T. Tham and G.A. Montague 413 Non-linear principal components analysis using genetic programming

C. Wang, H. Quan and X. Xu 427 Optimal design of multiproduct batch chemical processes using tabu search

R. Pörn, I. Harjunkoski and T. Westerlund 439 Convexification of different classes of non-convex MINLP problems

NUMBER 4–5

449 Editorial

T. I. Malik and S. Skogestad 451 Summary of discussion session on 'industry–academic interactions and open standards'

E. M. B. Smith and C. C. Pantelides 457 A symbolic reformulation/spatial branch-and-bound algorithm for the global optimisation of nonconvex MINLPs

A. Lakshmanan, W. C. Rooney and L. T. Biegler 479 A case study for reactor network synthesis: the vinyl chloride process

M. Sorin and J. Paris 497 Integrated exergy load distribution method and pinch analysis

B. Glemmestad, S. Skogestad and T. Gundersen 509 Optimal operation of heat exchanger networks

S. Hasebe, M. Noda and I. Hashimoto 523 Optimal operation policy for total reflux and multi-effect batch distillation systems

E. Sørensen 533 A cyclic operating policy for batch distillation–theory and practice

J. Albuquerque, V. Gopal, G. Staus, L.T. Biegler and B.E. Ydstie 543 Interior point SQP strategies for large-scale, structured process optimization problems

A. Vecchietti and I. E. Grossmann 555 LOGMIP: a disjunctive 0–1 non-linear optimizer for process system models

R.J. Allgor and P.I. Barton 567 Mixed-integer dynamic optimization I: problem formulation

J. U. Mallya, S. E. Zitney, S. Choudhary and M.A. Stadtherr 585 Matrix reordering effects on a parallel frontal solver for large scale process simulation

S.J. Honkomp, L. Mockus and G.V. Reklaitis 595 A framework for schedule evaluation with processing uncertainty

S. Gonnet and O. Chiotti 611 Modeling of the supervisory control system of a multipurpose batch plant

H. Cabezas, J. C. Bare and S. K. Mallick 623 Pollution prevention with chemical process simulators: the generalized waste reduction (WAR) algorithm—full version

G. Schilling and C. C. Pantelides 635 Optimal periodic scheduling of multipurpose plants

H. Li, M. Lu and Y. Naka 657 A model chain based methodology for quantitative planning of operating procedures

M. Morari and J. H. Lee 667 Model predictive control: past, present and future

NUMBER 6

D.J. Yoo, H.-K. Lee, J.-H. Ryu and I.-B. Lee 683 Generalized retrofit design of multiproduct batch plants

R. Femat, J. Alvarez-Ramírez and M. Rosales-Torres 697 Robust asymptotic linearization via uncertainty estimation: regulation of temperature in a fluidized bed reactor

H. Yeomans and I.E. Grossmann 709 A systematic modeling framework of superstructure optimization in process synthesis

N. Abdel-Jabbar, B. Carnahan and C. Kravaris 733 A multirate parallel-modular algorithm for dynamic process simulation using distributed memory multicomputers

N. Kazantzis and C. Kravaris 763 Time-discretization of nonlinear control systems via Taylor methods

J.D. Kelly 785 Reconciliation of process data using other projection matrices

R. Zanovello and H. Budman 791 Model predictive control with soft constraints with application to lime kiln control

S. Støren and T. Hertzberg 807 Obtaining sensitivity information in dynamic optimization problems solved by the sequential approach

NUMBER 7

C.M. McDonald and C.A. Floudas 821 Best paper of 1997: GLOPEQ: A new computational tool for the phase and chemical equilibrium problem: Computers & Chemical Engineering, Vol 21, No. 1. p. 1–24

M.C. Georgiadis, G. Schilling, G.E. Rotstein and S. Macchietto 823 A general mathematical programming approach for process plant layout

M. Sánchez, J. Romagnoli, Q. Jiang and M. Bagajewicz 841 Simultaneous estimation of biases and leaks in process plants

D.J. Ternet and L.T. Biegler 859 Interior-point methods for reduced Hessian successive quadratic programming

H.P. Nott and P.L. Lee 875 Sets formulation to schedule mixed batch/continuous process plants with variable cycle time

K. Morad, W. Y. Svrcek and I. McKay 889 A robust direct approach for calculating measurement error covariance matrix

B.H. Chen, X.Z. Wang, S.H. Yang and C. McGreavy 899 Application of wavelets and neural networks to diagnostic system development, 1, feature extraction

H.P. Nott and P.L. Lee 907 An optimal control approach for scheduling mixed batch/continuous process plants with variable cycle time

T.K. Bhatia and L.T. Biegler 919 Multiperiod design and planning with interior point methods

F. Liu and S.K. Bhatia 933 Computationally efficient solution techniques for adsorption problems involving steep gradients in bidisperse particles

X.Z. Wang, B.H. Chen, S.H. Yang and C. McGreavy 945 Application of wavelets and neural networks to diagnostic system development, 2, an integrated framework and its application

H. Geyer, P. Ulbig and S. Schulz 955 Use of evolutionary algorithms for the calculation of group contribution parameters in order to predict thermodynamic properties: Part 2: Encapsulated evolution strategies

NUMBER 8

N.E. Benes, R. Verzijl and H. Verweij 975 Numerical scheme for simulating multicomponent mass transport accompanied by reversible chemical reactions in porous media

K. H. Rasmussen and S. Bay Jørgensen 987 Parametric uncertainty modeling for robust control: a link to identification

S. Hernández and A. Jiménez 1005 Design of energy-efficient Petlyuk systems

S.D. Dimitrov and D.I. Kamenski 1011 Binary mixture properties: fitting with canonical rational functions

R.D. Braatz and E.L. Russell 1021 Robustness margin computation for large scale systems

E.J. Adam and J.L. Marchetti 1031 Dynamic simulation of large boilers with natural recirculation

Y.-h. Lin, H.-Y. Chang and R.A. Adomaitis 1041 MWRtools: a library for weighted residual method calculations

K.V. Camarda and M.A. Stadtherr 1063 Matrix ordering strategies for process engineering: graph partitioning algorithms for parallel computation

S.A. van den Heever and I. E. Grossmann 1075 Disjunctive multiperiod optimization methods for design and planning of chemical process systems

C. Shene, C. Diez and S. Bravo 1097 Neural networks for the prediction of the state of *Zymomonas mobilis* CP4 batch fermentations

S. Bandyopadhyay, R.K. Malik and U.V. Shenoy 1109 Invariant rectifying-stripping curves for targeting minimum energy and feed location in distillation

1125 Preface

NUMBER 9

J.A. Blasco, N. Fueyo, J.C. Larroya, C. Dopazo and Y.-J. Chen	1127	A single-step time-integrator of a methane–air chemical system using artificial neural networks
H. Yeomans and I.E. Grossmann	1135	Nonlinear disjunctive programming models for the synthesis of heat integrated distillation sequences
T.J. Crowley and K.Y. Choi	1153	Control of copolymer hydrodynamic volume distribution in a semibatch free radical copolymerization process
R. Lanouette, J. Thibault and J.L. Valade	1167	Process modeling with neural networks using small experimental datasets
V. Alopaeus and H.V. Nordén	1177	A calculation method for multicomponent mass transfer coefficient correlations
Y. Peng Lee, G. Pandu Rangaiah and R. Luus	1183	Phase and chemical equilibrium calculations by direct search optimization
S. Moon and A.N. Hrymak	1193	Scheduling of the batch annealing process — deterministic case
M. Kavchak and H. Budman	1209	Adaptive neural network structures for non-linear process estimation and control
M. Castier	1229	Automatic implementation of thermodynamic models using computer algebra
T.T. Lee, F.Y. Wang and R.B. Newell	1247	Dynamic simulation of bioreactor systems using orthogonal collocation on finite elements
K. Holiastos and V. Manousiouthakis	1263	Minimum hot-cold and electric utility cost for a finite-capacity reservoir system
J.-P. Chiou and F.-S. Wang	1277	Hybrid method of evolutionary algorithms for static and dynamic optimization problems with application to a fed-batch fermentation process
G. Baffi, E.B. Martin and A.J. Morris	1293	Non-linear projection to latent structures revisited (the neural network PLS algorithm)
H. Mahgerefteh and S.M.A. Wong	1309	A numerical blowdown simulation incorporating cubic equations of state
F. Jalali and J.D. Seader	1319	Homotopy continuation method in multi-phase multi-reaction equilibrium systems
D. Hertz, C.S. Adjiman and C.A. Floudas	1333	Two results on bounding the roots of interval polynomials
R.P. Byrne and I.D.L. Bogle	1341	Global optimisation of constrained non-convex programs using reformulation and interval analysis

Short note

S.H. Choi, J.W. Ko and V. Manousiouthakis 1351 A stochastic approach to global optimization of chemical processes

1357 Announcements

NUMBER 10

Special Issue: Design and operation of sustainable and environmentally benign processes, edited by Efstratios N. Pistikopoulos

E.N. Pistikopoulos 1363 Preface

B.S. Ahmad and P.I. Barton 1365 Process-wide integration of solvent mixtures

M. Sinha, L.E.K. Achenie and G.M. Ostrovsky 1381 Environmentally benign solvent design by global optimization

M. Hostrup, P.M. Harper and R. Gani 1395 Design of environmentally benign processes: integration of solvent design and separation process synthesis

A.A. Linninger and A. Chakraborty 1415 Synthesis and optimization of waste treatment flowsheets

M. Almató, A. Espuña and L. Puigjaner 1427 Optimisation of water use in batch process industries

A. Alva-Argáez, A. Vallianatos and A. Kokossis 1439 A multi-contaminant transhipment model for mass exchange networks and wastewater minimisation problems

M.A. Steffens, E.S. Fraga and I.D.L. Bogle 1455 Multicriteria process synthesis for generating sustainable and economic bioprocesses

P. Sharratt 1469 Environmental criteria in design

D.M. Young and H. Cabezas 1477 Designing sustainable processes with simulation: the waste reduction (WAR) algorithm

M.M. Dantus and K.A. High 1493 Evaluation of waste minimization alternatives under uncertainty: a multiobjective optimization approach

A. Azapagic and R. Clift 1509 The application of life cycle assessment to process optimisation

M. Bahy Noureldin and M.M. El-Halwagi 1527 Interval-based targeting for pollution prevention via mass integration

I. Harjunkoski, T. Westerlund and R. Pörn 1545 Numerical and environmental considerations on a complex industrial mixed integer non-linear programming (MINLP) problem

W.C. Rooney and L.T. Biegler 1563 Incorporating joint confidence regions into design under uncertainty

NUMBER 11–12

G.V. Reklaitis 1583 Editorial note

G.V. Reklaitis	1585	Best paper of 1998: Integration of hierarchical decomposition and mathematical programming for the synthesis of process flowsheets: Computers & Chemical Engineering, Vol 22, No. 1–2, pp. 147–175
S. Ahmed, N.V. Sahinidis and E.N. Pistikopoulos	1589	An improved decomposition algorithm for optimization under uncertainty
S. Ahmed and N.V. Sahinidis	1605	Analytical investigations of the process planning problem
J. Lee and T.F. Edgar	1623	Phase conditions for stability of multi-loop control systems
Y.F. Hu, K.C.F. Maguire and R.J. Blake	1631	A multilevel unsymmetric matrix ordering algorithm for parallel process simulation
S.S.S. Chakravarthy, A.K. Vohra and B.S. Gill	1649	Predictive emission monitors (PEMS) for NO_x generation in process heaters
N. Hallale and D.M. Fraser	1661	Capital and total cost targets for mass exchange networks. Part 1: Simple capital cost models
N. Hallale and D.M. Fraser	1681	Capital and total cost targets for mass exchange networks. Part 2: Detailed capital cost models
P.A. Webley and J. He	1701	Fast solution-adaptive finite volume method for PSA/VSA cycle simulation; 1 single step simulation
V. Kumar and S.N. Upadhyay	1713	Computer simulation of membrane processes: ultrafiltration and dialysis units
V. Jairazbhoy and L.L. Tavlarides	1725	A numerical technique for the solution of integrodifferential equations arising from balances over populations of drops in turbulent flows
A. Bettoni, M. Bravi and A. Chianese	1737	Inferential control of a sidestream distillation column
C.-T. Chen and M.-D. Wang	1745	A two-degrees-of-freedom design methodology for interval process systems
A. Zheng	1753	Does nonlinear dynamic matrix control provide integral control?
M. Bagajewicz and M. Sánchez	1757	Cost-optimal design of reliable sensor networks
D.H. Zhou and P.M. Frank	1763	A real-time estimation approach to time-varying time delay and parameters of NARX processes
J.-C. Toebermann, J. Rosenkranz, J. Werther and G. Gruhn	1773	Block-oriented process simulation of solids processes
T. Park and P.I. Barton	1783	Formal verification of sequence controllers
K.M. Kam and M.O. Tadé	1795	Simulated nonlinear control studies of five-effect evaporator models

R. Fletcher and W. Morton 1811 Initialising distillation column models

V.R. Vasquez and W.B. Whiting 1825 Uncertainty and sensitivity analysis of thermodynamic models using equal probability sampling (EPS)

G. Leu and R. Baratti 1839 An extended Kalman filtering approach with a criterion to set its tuning parameters; application to a catalytic reactor
